

Enter a list of moth records from a trap

Complete the three sections of the form below and submit using the button at the end of the final comment.

Where were you? **What did you see?** Final comment

Please enter a quantity for all the species you saw at one trap on a single night.

For convenience, you can pre-populate the list with species seen previously but records will only be created for those you give a quantity.

Use species list :

Species	Qty inside	Qty outside	Identified By	Kommentar	Add photos
<input type="checkbox"/> <i>Peribatodes rhomboidaria</i>	1		Musche, Martin		<input type="button" value="Add images"/>
<input type="checkbox"/> Noctua janthe/ janthina			Musche, Martin		<input type="button" value="Add images"/>
<input type="checkbox"/> <i>Eilema complana</i>	1		Musche, Martin		<input type="button" value="Add images"/>
<input type="checkbox"/> No selection from the list possible			Musche, Martin		Select a species first

Click in the species box and start typing a species name (English or scientific), the more characters the better. Use * as a wildcard, and use name abbreviations (e.g. 2+3 characters for Genus+species). A list of suggestions will pop up from which you can select with mouse or arrow keys and tab.

Enter the quantity seen as a number (or leave blank to simply indicate presence), and select the life stage plus the sex if available.

Enter who identified, and the determiner names (if different from the recorder name given).

Add a comment if you like, for example an approximate quantity or significance of the record. Tab between the attribute fields.
